## DETAILED ACTION

### *Claim Rejections - 35 USC § 101*

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 11 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 11 is considered to be a computer program per se with no accompanying computer readable medium, and thus constitutes non-statutory subject matter. See MPEP for a description of computer related inventions and note the need for a tangible result beyond the mere listing of program steps.

Functional descriptive material claimed in combination with an appropriate computer readable medium to enable the functionality to be realized is patent eligible subject matter if it is capable of producing a useful, concrete and tangible result when used in the computer system. Compare *Warmerdam* to *In re Lowry* 32 USPQ2d 1031 where a memory with a data structure that increased computing efficiency was patentable.

The computer readable medium must be physical structure which provides the functional descriptive material in usable form to permit the functionality to be realized with the computer. A program product which does not explicitly include such a medium, a program per se, a signal or other type of transmission media that fails to include the hardware necessary to realize the functionality (e.g., a transmitter or a receiver), and a piece of paper with the functional descriptive material written on it are all examples of media which are not believed to enable the functionality to be realized with the computer.

Another example of a practical application within the context of computer related inventions is a claim to a computer program on a computer readable medium where the program when executed causes the computer to produce a useful, concrete and tangible result. Please take note that it is possible for a computer program on a computer readable medium to not include a practical application and thus be non-statutory. For example, a computer program on the requisite computer readable medium which merely sets forth generic instructions for solving the mathematical equation  $e=mc^2$  does not satisfy the practical application test. On the other hand, a

Art Unit: 2851

claim to an algorithm that imparts increased efficiency to a computer in computing a particular equation may satisfy such a test. Therefore, a claim to a proper computer readable medium (not e.g. a signal or program listing on paper) encoded with functional descriptive material that can function with a computer to effect a useful, concrete and tangible result (e.g. running an assembly line or executing a stock transaction) satisfies the practical application test. Note that the specification may provide evidence as to what Applicant intends to be included within the metes and bounds of the claimed medium. If there is evidence the medium is intended to cover embodiments which are non-statutory, i.e., the medium is not limited to those media which fall within a statutory category of invention and enable the functionality of what's stored thereon to be realized, the claim must be so rejected. At this time, if Applicant provides no evidence of intent, the reasonable interpretation of computer or machine readable medium conveyed to one of ordinary skill is appropriate tangible physical articles or objects.
